SUMMARY

Fresh graduate in IT (data science) with a strong foundation in software development, cloud computing, and AI-driven solutions. Recently completed internship at Intel, where I improved automation and accuracy in ticket management systems using LLMs, RAG, and CNVRG.

WORK EXPERIENCE

Development Engineer, Standard Chartered **July 2025 - Present**

- Completed a 1-month intensive bootcamp covering Java Spring Boot, React, Docker, and Java EE, gaining hands-on experience in full-stack application development.
- Participated in project POC development, involving front-end, workflow tools, and API integration.
- Implemented secure coding practices, supported vulnerability fixes (CSR findings), and ensured codebase compliance with SCB security frameworks.

Data Science Intern, Intel Technology Sdn Bhd **Oct 2024 - April 2025**

- Developed AI-driven ticket management solutions using Azure OpenAI and Retrieval-Augmented Generation (RAG) framework.
- Implemented embedding Model, and saved to PG Vector database for similarity search.
- Utilized CNVRG for model orchestration and deployment pipelines.
- Followed Scrum methodology for project management and collaborated in Agile development cycles.
- Collaborated with machine learning engineers to integrate AI solutions into production environments, and improving automation.
- Achieved a 10% boost in retrieval accuracy, reducing manual interventions in operations.

EDUCATION

Bachelor of Science (Honors) In Information Technology (Data Science) **Oct 2021 - Apr 2025**

Universiti Utara Malaysia

- Dean’s List (6 Semesters, 2021 - Present)
- Presenter at Cybersecurity Awareness Event Booth (2024) - public exhibition booth
- CGPA: 3.82 / 4.00 (First Class Honors)

PROJECT

Real-Time WIP Dashboard (Internship)

- Developed a Work in Progress (WIP) tracking dashboard for Intel's Technology Development operations.
- Implemented data visualization and analytics features using HTML, CSS, and JavaScript.
- Created a responsive web interface with Bootstrap and modern UI components.

Speech Emotion Recognition - Mobile Apps (FYP)

- Built and trained CNN models using TensorFlow and Keras for emotion classification.
- Developed a mobile application capable of recognizing emotions from speech using deep learning.
- Integrated AI models into a Flutter-based mobile app using Flask API.
- Achieved 91% accuracy in speech emotion recognition and successfully deployed the app on Android.

ADDITIONAL INFORMATION

- **Technical Skills:** JavaScript, SQL/NoSQL, Python, Node.js, Langchain, Google AI Studio, Docker, HuggingFace, LLMs, CNVRG, UiPath, Apache, RAG, TensorFlow, EDA, swagger, VB.net, Azure cloud service, Git, Bootstrap, jQuery, CSS.
- **Languages:** English, Malay, Chinese
- **Certifications:** SQL Associate Certificate, AI Engineer for Developers Associate certificate,AI Engineer for Data Scientists Associate certificate – DataCamp, Java Basic - Hackerank
